

GREENSKIN™

RADON GAS SEALS

Patent Pending Technology

Use GREENSKIN for a cost effective and simple solution to seal all penetrations through the ground

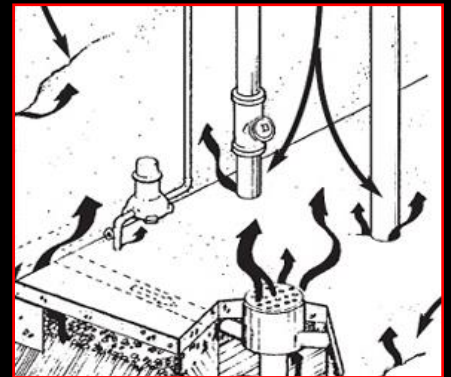

GREENSKIN
provides an air
tight seal and is
available in all
sizes

What is Radon?

Radon is a radioactive gas that occurs naturally when the uranium in soil and rocks breaks down. It is invisible, odourless and tasteless.

Radon gas breaks down or decays to form radioactive elements that can be inhaled into the lungs. Exposure to high levels of radon in indoor air results in an increased risk of serious illness.

Radon can easily enter into buildings by infiltration of utility penetrations
